(54) Title: PROGRAM PRESENTATION IN AN ELECTRONIC PROGRAM GUIDE

**WO 03/092271 A1**

(57) Abstract: Method and apparatus are described for compensating for a linear time scale change in a received signal, so as to correctly rescale the frame sequence of the received signal. Firstly, an initial estimate of the sequence of symbols is extracted from the received signal. Successive estimates of correctly time scaled sequences of the symbols are then generated by interpolating the values of the initial estimates.
